// THE COMPANY

Make your data *think.* Make your business act.

FRIDAI

AGENTIC DATA OS

Connects any system, learns data semantics, generates operational pipelines & apps — no code required.

ESPEIRIA

CAD AUTOMATION

Converts engineering know-how into executable rules. Auto-generates CAD 3D, BOM and product variants.

AIDRA

GENERATIVE BI FINANCE

Real-time financial intelligence for CFOs. Semantic ETL, LLM on KPIs, what-if in natural language.

// ELEVATOR PITCH

We give companies the AI infrastructure that enterprise vendors *price them out of.*

03

Lemonjuice connects any company's existing systems, learns their data automatically, and generates operational software.

// WHAT

Three AI-native products on one shared architecture. Zero migration. Zero IT team. UIBM patent · On-premise.

// MARKET

TAM **$82B→$156B** by 2030 · EU target **€4.8B** · 200,000+ companies with fragmented systems.

// RESULTS

-95% eng. time · **-70%** late deliveries · **0** loss orders · **<4m** ROI · **2** clients live · **83%** Year-1 target.

// THE PROBLEM

Companies are sitting on data they cannot *use.*

73% of company data is never used for decisions — costing **15–30%** of annual revenue.

04

01

Fragmented systems

ERP, CRM, CAD, Excel — each a silo. Data exists but is structurally inaccessible.

02

Know-how in people

Engineering rules live in 2–3 people. When they leave, knowledge leaves too.

03

Manual reporting

Controllers dedicate 2 days/week to reconciling disconnected systems.

04

Enterprise AI too expensive

Copilot, Fabric, Palantir require clean data, IT teams, six-figure budgets.

// THE SOLUTION

Connect. Understand. *Generate.*
